

Introduction

We found the formula of the best rank-1 factor sharing NMF w.r.t. minimizing KL divergence.

- We developed a non-gradient-based rank-1 NMF method with missing values based on the formula.
- Rank-1 Non-negative Multiple Matrix Factorization _____ For given **X**, **Y** and **Z**, rank-1 NMMF (non-negative multiple matrix factorization) finds *a*, *b*, *w* and *h* to minimize $D(\mathbf{X}, \boldsymbol{w} \otimes \boldsymbol{h}) + \alpha D(\mathbf{Y}, \boldsymbol{a} \otimes \boldsymbol{h}) + \beta D(\mathbf{Z}, \boldsymbol{w} \otimes \boldsymbol{b})$.

Rank-1 NMF with Missing Values.

Main Result.

The best rank-1 NMMF of **X**, **Y** and **Z** is given as

$$w_{i} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \beta S(\mathbf{Z})} \left\{ \sum_{j} \mathbf{X}_{ij} + \sum_{m} \beta \mathbf{Z}_{im} \right\}, \ a_{n} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}}{S(\mathbf{X}) + \alpha S(\mathbf{Y})} \left\{ \sum_{i} \mathbf{X}_{ij} + \sum_{n} \alpha \mathbf{Y}_{nj} \right\}, \ b_{m} = \frac{\sqrt{S(\mathbf{X})}$$

 $S(\mathbf{X})$ is sum of all elements of \mathbf{X} .

Fast Rank-1 NMF for Missing Data with KL Divergence Kazu Ghalamkari^{1,2}, Mahito Sugiyama^{1,2}

Matrices

Log-linear model on poset:

 $\eta_{kl} = \sum p(s,t) \quad p(k,l) = \exp \left[\sum \theta_{st} \right]$ $(k,l) \leq (s,t)$

Index set of the poset is the sample space. Information Geometry of Rank-1 NMMF_ (X,Y,Z) is simultaneously rank-1 decomposable. \Leftrightarrow It can be written as $(w \otimes h, a \otimes h, w \otimes b)$. Simultaneous Rank-1 η -condition

 $\eta_{ij} = \eta_{i1}\eta_{1j}$

Simultaneous Rank-1 **0**-condition Its all two-body θ -parameters are 0.

One-body η -parameters do not change before or after the projection.

 θ_{1i}

Probability on a poset One-body parameter O Two-body parameter $(s,t) \leq (k,l)$

(X,Y,Z) $D(\mathbf{X}, \boldsymbol{w} \otimes \boldsymbol{h})$ $+D(\mathbf{Y}, \boldsymbol{a} \otimes \boldsymbol{h}) + D(\mathbf{Z}, \boldsymbol{w} \otimes \boldsymbol{b})$ $/(w \otimes h, a \otimes h, w \otimes b)/$ Simultaneous rank-1 subspace \mathbf{Q}

Faster Rank-1 NMF with Missing Values _____

A1GM is a non-gradient-based method. Step1: Increase the number of missing values. Step2: Gather missing values in the bottom right.

Input							
2	3	3	1	4			
3	4	1	\bigotimes	1			
3	9	1	1	3			
5	\bigotimes	3	4	1			
1	4	2	2	3			

Experiments on Real Data

- Our method is compared with gradient-based KL-WNMF. - Relative runtime < 1 means A1GM is faster than KL-WNMF. - Relative error > 1 means worse reconstruction error of A1GM than KL-WNMF.

Increase rate is the ratio of # missing values after addition of missing values at step1.

NMMF can be viewed as a special case of NMF with missing values.

- A1GM: Proposed Method for Rank-1 NMF with Missing Values.

No worries about initial values, stopping criterion, and learning rate \bigoplus .

- Step3: Use the formula of rank-1 NMMF and repermutate.

Much faster!!
